

Tenso Policy on Artificial Intelligence (AI)

2026

For Authors

I. Authorship

- AI cannot be an Author. Generative AI tools (e.g., ChatGPT, Large Language Models) do not meet the criteria for authorship, because they cannot take legal or ethical responsibility for the work, manage copyright agreements, or assert the absence of conflicts of interest.
- Human authors are solely responsible and accountable for the accuracy, integrity, and originality of the entire manuscript.

II. Manuscript Preparation

- Permissible Use: Authors may use AI tools to check spelling and grammar.
- Restricted Use: AI is not permitted for any other purpose.
 - In the event of ambiguity or uncertainty regarding AI usage, authors should contact the editor-in-chief or managing editor.
- Disclosure Requirements: Any use of generative AI must be disclosed at the time of submission.
- How to Disclose: Authors must include a statement as a separate declaration detailing:
 - The names and versions of the AI tools used.
 - The specific task the tools performed (e.g., "summarizing data," "drafting portions of the introduction," "language proofing").

III. Images, Figures, and Artwork

- The use of generative AI to create or manipulate images, figures, and graphical abstracts is generally prohibited.
- Exceptions: AI-assisted imaging is only permitted if cleared first with the editorial team. Use must be described in a reproducible manner in the article.
-

For Editors and Reviewers

- Reviewers and editors must not upload any part of a manuscript into a generative AI tool. Uploading manuscripts violates authors' confidentiality and proprietary rights.
- Disclosure: If a reviewer uses AI to edit the language of their report, they must disclose this use to the editor.
- Editors and reviewers are fully responsible and accountable for the content, accuracy, and integrity of their reports.
